Fifth Grade
Quarter 1

Month: August, September, and October
Domain(s): • Number and Operations in Base Ten
Cluster(s): • Understand the place value system. • Perform operations with multi-digit whole numbers and with decimals to hundredths.

Standard(s):
5.NBT.1: Recognize that in a multi-digit number, a digit in one place represents 10 times as much as it represents in the place to its right and 1/10 of what it represents in the place to its left.
 	
5.NBT.2: Explain patterns in the number of zeros of the product when multiplying a number by powers of 10, and explain patterns in the placement of the decimal point when a decimal is multiplied or divided by a power of 10. Use whole-number exponents to denote powers of 10.
 	
5.NBT.3: Read, write, and compare decimals to thousandths.
 	
    a. Read and write decimals to thousandths using base-ten numerals, number names, and expanded form, e.g., $347.392 = 3 \times 100 + 4 \times 10 + 7 \times 1 + 3 \times (1/10) + 9 \times (1/100) + 2 \times (1/1000)$.
 	
    b. Compare two decimals to thousandths based on meanings of the digits in each place, using >, =, and < symbols to record the results of comparisons.
 	
5.NBT.4: Use place value understanding to round decimals to any place.
 	
5.NBT.5: Fluently multiply multi-digit whole numbers using the standard algorithm.
 	
5.NBT.6: Find whole-number quotients of whole numbers with up to four-digit dividends and two-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.
 	
5.NBT.7: Add, subtract, multiply, and divide decimals to hundredths, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written

method and explain the reasoning used.

Targeted Skills:
- Naming the place value of decimals through thousandths
- Writing and translating decimals and whole numbers in standard form, expanded form, and words
- Ordering and comparing decimals using the symbols: >, =, and <
- Rounding decimals
- Fluently multiply multi-digit whole numbers
- Fluently divide numbers with up to four-digit dividends and up to two-digit divisors
- Relate multiplication and division
- Adding and subtracting decimals to hundredths
- Multiply and divide decimals to hundredths
- Use properties of operations to perform operations with multi-digit whole numbers and with decimals to hundredths

Key Vocabulary:

Tenths	hundredths	thousandths	standard form	expanded form	greater
than less than	equal to	product	quotient	divisor	
dividend	sum	difference			

Fifth Grade
Quarter 2

Month: October, November, December
Domain(s):   • Operations and Algebraic Thinking   • Measurement and Data
Cluster(s):   • Write and interpret numerical expressions.   • Analyze patterns and relationships.   • Convert like measurement units within a given measurement system.   • Represent and interpret data.
Standard(s):   **5.OA.1:** Use parentheses, brackets, or braces in numerical expressions, and evaluate expressions with these symbols.   **5.OA.2:** Write simple expressions that record calculations with numbers, and interpret numerical expressions without evaluating them. *For example, express the calculation "add 8 and 7, then multiply by 2" as 2 × (8 + 7). Recognize that 3 × (18932 + 921) is three times as large as 18932 + 921, without having to calculate the indicated sum or product.*   **5.OA.3:** Generate two numerical patterns using two given rules. Identify apparent relationships between corresponding terms. Form ordered pairs consisting of corresponding terms from the two patterns, and graph the ordered pairs on a coordinate plane. *For example, given the rule "Add 3" and the starting number 0, and given the rule "Add 6" and the starting number 0, generate terms in the resulting sequences, and observe that the terms in one sequence are twice the corresponding terms in the other sequence. Explain informally why this is so.*   **5.MD.1:** Convert among different-sized standard measurement units within a given measurement system (e.g., convert 5 cm to 0.05 m), and use these conversions in solving multi-step, real world problems.   **5.MD.2:** Make a line plot to display a data set of measurements in fractions of a unit (1/2, 1/4, 1/8). Use operations on fractions for this grade to solve problems involving information presented in line plots. *For example, given different measurements of liquid in identical beakers, find the amount of liquid each beaker would contain if the total amount in all the beakers were redistributed equally.*

Targeted Skills:
- Solving expressions using the order of operations
- Writing numerical expressions
- Evaluate numerical expressions
- Write a rule that fits a pattern
- Graph ordered pairs
- Determine the relationship between an ordered pair
- Converting between units of length, weight, and capacity
- Make a line plot
- Interpret line plot data

Key Vocabulary:

parentheses	brackets	braces	numerical expression	evaluate
interpret	generate	ordered pairs	corresponding terms	convert
line plot				

Aligned to New Math Common Core State Standards

Fifth Grade
Quarter 3

Month: December, January, February, March
Domain(s): • Measurement and Data • Geometry
Cluster(s): • Classify two-dimensional figures into categories based on their properties. • Geometric measurement: understand concepts of volume and relate volume to multiplication and to addition. • Graph points on the coordinate plane to solve real-world and mathematical problems.

Standard(s):
5.G.3: Understand that attributes belonging to a category of two-dimensional figures also belong to all subcategories of that category. For example, all rectangles have four right angles and squares are rectangles, so all squares have four right angles.
 	
5.G.4: Classify two-dimensional figures in a hierarchy based on properties.
 	
5.MD.3: Recognize volume as an attribute of solid figures and understand concepts of volume measurement.
 	
    a. A cube with side length 1 unit, called a "unit cube," is said to have "one cubic unit" of volume, and can be used to measure volume.
 	
    b. A solid figure which can be packed without gaps or overlaps using n unit cubes is said to have a volume of n cubic units.
 	
5.MD.4: Measure volumes by counting unit cubes, using cubic cm, cubic in, cubic ft, and improvised units.
 	
5.MD.5: Relate volume to the operations of multiplication and addition and solve real world and mathematical problems involving volume.
 	
    a. Find the volume of a right rectangular prism with whole-number side lengths by packing it with unit cubes, and show that the volume is the same as would be found by multiplying the edge lengths, equivalently by multiplying the height by the area of the base. Represent threefold whole-number products as volumes, e.g., to represent the associative property of multiplication.

b. Apply the formulas $V = l \times w \times h$ and $V = b \times h$ for rectangular prisms to find volumes of right rectangular prisms with whole-number edge lengths in the context of solving real world and mathematical problems.

c. Recognize volume as additive. Find volumes of solid figures composed of two non-overlapping right rectangular prisms by adding the volumes of the non-overlapping parts, applying this technique to solve real world problems.

5.G.1: Use a pair of perpendicular number lines, called axes, to define a coordinate system, with the intersection of the lines (the origin) arranged to coincide with the 0 on each line and a given point in the plane located by using an ordered pair of numbers, called its coordinates. Understand that the first number indicates how far to travel from the origin in the direction of one axis, and the second number indicates how far to travel in the direction of the second axis, with the convention that the names of the two axes and the coordinates correspond (e.g., *x*-axis and *x*-coordinate, *y*-axis and *y*-coordinate).

5.G.2: Represent real world and mathematical problems by graphing points in the first quadrant of the coordinate plane, and interpret coordinate values of points in the context of the situation.

Targeted Skills:
- Use properties (side lengths and angle measurements) to identify two-dimensional figures
- Classify two-dimensional figures
- Use models to measure volume
- Determine the number of unit cubes in a solid figure
- Use cubic centimeters, inches, and feet to measure volume
- Solve real world mathematics problems involving volume
- Find the volume of a rectangular prism using unit cubes
- Apply the formula V = l x w x h for rectangular prisms
- Recognize volume as additive
- Name ordered pairs for given points
- Graph points on a coordinate plane
- Interpret coordinate values in a real world mathematic problem

Key Vocabulary:

two-dimensional	properties	classify	volume	unit cubes
cubic (centimeters, inches, and feet)		additive	rectangular prism	formula
ordered pairs	coordinate plan	quadrant		

Fifth Grade
Quarter 4

Month: March, April, May, June
Domain(s):
• Numbers and Operations- Fractions
Cluster(s):
• Use equivalent fractions as a strategy to add and subtract fractions.
• Apply and extend previous understandings of multiplication and division to multiply and divide fractions.
Standard(s):

5.NF.1: Add and subtract fractions with unlike denominators (including mixed numbers) by replacing given fractions with equivalent fractions in such a way as to produce an equivalent sum or difference of fractions with like denominators. *For example, 2/3 + 5/4 = 8/12 + 15/12 = 23/12. (In general, a/b + c/d = (ad + bc)/bd.)*

5.NF.2: Solve word problems involving addition and subtraction of fractions referring to the same whole, including cases of unlike denominators, e.g., by using visual fraction models or equations to represent the problem. Use benchmark fractions and number sense of fractions to estimate mentally and assess the reasonableness of answers. *For example, recognize an incorrect result 2/5 + 1/2 = 3/7, by observing that 3/7 < 1/2.*

5.NF.3: Interpret a fraction as division of the numerator by the denominator ($a/b = a \div b$). Solve word problems involving division of whole numbers leading to answers in the form of fractions or mixed numbers, e.g., by using visual fraction models or equations to represent the problem. *For example, interpret 3/4 as the result of dividing 3 by 4, noting that 3/4 multiplied by 4 equals 3, and that when 3 wholes are shared equally among 4 people each person has a share of size 3/4. If 9 people want to share a 50-pound sack of rice equally by weight, how many pounds of rice should each person get? Between what two whole numbers does your answer lie?*

5.NF.4: Apply and extend previous understandings of multiplication to multiply a fraction or whole number by a fraction.

    a. Interpret the product (a/b) × q as a parts of a partition of q into b equal parts; equivalently, as the result of a sequence of operations $a \times q \div b$. *For example, use a visual fraction model to show (2/3) × 4 = 8/3, and create a story context for this equation. Do the same with (2/3) × (4/5) = 8/15. (In general, (a/b) × (c/d) = ac/bd.)*

    b. Find the area of a rectangle with fractional side lengths by tiling it with unit squares of the appropriate unit fraction side

lengths, and show that the area is the same as would be found by multiplying the side lengths. Multiply fractional side lengths to find areas of rectangles, and represent fraction products as rectangular areas.

5.NF.5: Interpret multiplication as scaling (resizing), by:

a. Comparing the size of a product to the size of one factor on the basis of the size of the other factor, without performing the indicated multiplication.

b. Explaining why multiplying a given number by a fraction greater than 1 results in a product greater than the given number (recognizing multiplication by whole numbers greater than 1 as a familiar case); explaining why multiplying a given number by a fraction less than 1 results in a product smaller than the given number; and relating the principle of fraction equivalence $a/b = (n \times a)/(n \times b)$ to the effect of multiplying a/b by 1.

5.NF.6: Solve real world problems involving multiplication of fractions and mixed numbers, e.g., by using visual fraction models or equations to represent the problem.

5.NF.7: Apply and extend previous understandings of division to divide unit fractions by whole numbers and whole numbers by unit fractions.[1]

a. Interpret division of a unit fraction by a non-zero whole number, and compute such quotients. *For example, create a story context for (1/3) ÷ 4, and use a visual fraction model to show the quotient. Use the relationship between multiplication and division to explain that (1/3) ÷ 4 = 1/12 because (1/12) × 4 = 1/3.*

b. Interpret division of a whole number by a unit fraction, and compute such quotients. *For example, create a story context for 4 ÷ (1/5), and use a visual fraction model to show the quotient. Use the relationship between multiplication and division to explain that 4 ÷ (1/5) = 20 because 20 × (1/5) = 4.*

c. Solve real world problems involving division of unit fractions by non-zero whole numbers and division of whole numbers by unit fractions, e.g., by using visual fraction models and equations to represent the problem. *For example, how much chocolate will each person get if 3 people share 1/2 lb of chocolate equally? How many 1/3-cup servings are in 2 cups of raisins?*

Targeted Skills:
- Interpret a fraction
- Finding equivalent fractions
- Listing multiples of numbers
- Finding common multiples and least common multiple of two numbers

- Find the least common denominator of two factions
- Using the LCD to find equivalent fractions
- Add and subtract fractions and mixed numbers with unlike denominators
- Solve real world problems involving addition and subtraction of fractions
- Multiply a fraction by a whole number
- Find the area of a rectangle with fractional side lengths using a model
- Find the area of a rectangle with fractional side lengths using the formula
- Compare the sizes of two products
- Solve real world problems involving multiplication of fractions and mixed numbers
- Divide unit fractions by whole numbers
- Interpret division of fractions
- Solve real world problems involving dividing of fractions by non-zero whole numbers

Key Vocabulary:

fraction	mixed number	equivalent	numerator	denominator	unlike
interpret	whole number	area	rectangle	comparing	product
quotient	sum	difference	non-zero whole number
